It is a commonplace among students of history and politics that English history is a record of compromise, of half-way measures, of steps taken only under the pressure of emergency. The process, as it has gone on, has always been carefully scrutinized and appraised by Englishmen standing apart from it. Some of these observers have had direct authority, Disraeli for example; others have none except that derived from their writings, Dicey for example. Their work has always helped to bring some measure of order to the process of development, and to lead it to satisfactory ends.
